

Homework 1

Objective:

- Learning how to code simple functions to print input from a user and calculator the area of a rectangle and a circle.

Instructions:

- Make a function called `print_input` that takes in user input and the user's name and will print "userName, userInput."
- The next function should calculator the area of a rectangle and return the area. The method *area_of_rect* should take in 2 integers.
- The *area_of_circle* function should take in a radius and return the value of the area.

Handin:

- Hand in the file
